

Assessment Treatment and Protocol of TOTs for the Orofacial Myologist & Oral Habit Elimination

Course Descriptions:

Advancing the orofacial myofunctional therapist's knowledge beyond the basics in (TOTs) tethered oral tissues and oral habit elimination. Recognizing TOTs and oral habits is just the beginning, knowing what to do after initial training, is what this series will answer.

Early detection is necessary to intervene with harmful oral habits and TOTs to aide in the proper craniofacial growth and development.

This course will provide in detail the knowledge needed to empower the orofacial myofunctional therapist that has either completed their 28-hour introduction to orofacial myofunctional therapy course or any COM® who is curious about protocol others are using.

These webinars are intended to help provide the knowledge and guide the therapist in order to enhance their program or build their program with confidence.

Qualifications required for registering for webinars

Licensed Professionals:

DDS, RDH, SLP, COM®

**That have taken a 28-hour intro orofacial myofunctional
therapy course**
